

FOOD FORESTS ARE OUR PATH TO INFINITE ABUNDANCE.

Nature is infinitely abundant and expanding. We discover infinite abundance as we learn to imitate Mother Earth's forest style of growing.

Like in natural forests, the plant and animal kingdoms in a food forest continually grow and expand in mathematically perfect patterns, freely growing food and supplies for us and protecting the wildlife.

Grow and harvest a continuous abundance of nutritious nuts, fruits, veggies, herbs, berries, and edible roots in a food forest.

Nourish your body into well-being and bring our planet and her wild creatures back from the brink of disaster.
